

# BOHS P901 Legionella – Management and Control of Building Hot & Cold Water Services

This one day classroom course will provide an overview of the risk of legionella infection and how it can be controlled in domestic type hot and cold water systems.

## Who will benefit?

All staff involved in the management and operation of building water systems and those who have a roll in the control procedures.

## Course Aims

By the end of the course, delegates will understand :

- The origins of legionella and the factors which allow it to proliferate to hazardous levels in man-made water systems.
- The main conditions which cause legionella infection to occur in susceptible individuals.
- The fundamental principles of assessing the risk of exposure to legionella in domestic hot and cold water systems.
- The legal requirements, approved codes of practice (ACoP) and best practice guidance.
- Implementation of legionella control regimes with suitable monitoring programmes and records.

## Course Detail

The course will be supported with notes covering all aspects of the course.

These notes will provide future reference in the work place for all candidates. Training materials will be provided to each delegate.

## Accreditation

The course completes with an exam which is invigilated, marked and accredited by BOHS.

There is a closed book examination comprising 20 short answer questions to be answered in 60 minutes.

Successful completion of the above will lead to a Proficiency Certificate in Legionella – Management and Control of Building Hot and Cold Water Services.
